PRAVAAH — measured skill of all three models

Model	What it does	Headline skill	Baselines on the same rows	Test positives	Margin
RainCast	0–6 h rain nowcast (head p5 · 3 h)	CSI 0.121	persistence 0.049 raw NWP 0.015	4,136	2.5x persistence 8.1x raw NWP
RainFuse	6–72 h NWP correction	CSI 0.090	raw NWP 0.080	4,066	1.1x raw NWP Brier 0.0112 vs 0.0401
InundaNet	rain → ward flood probability	AUC-PR 0.611	terrain-only 0.062	8,595	9.8x terrain baseline ROC-AUC 0.954

All figures are on a HELD-OUT TEST YEAR, split by year and event, never randomly. Baselines are computed on identical rows. RainCast thresholds are on the ERA5 scale, which smooths convective extremes — see the limits panel.
