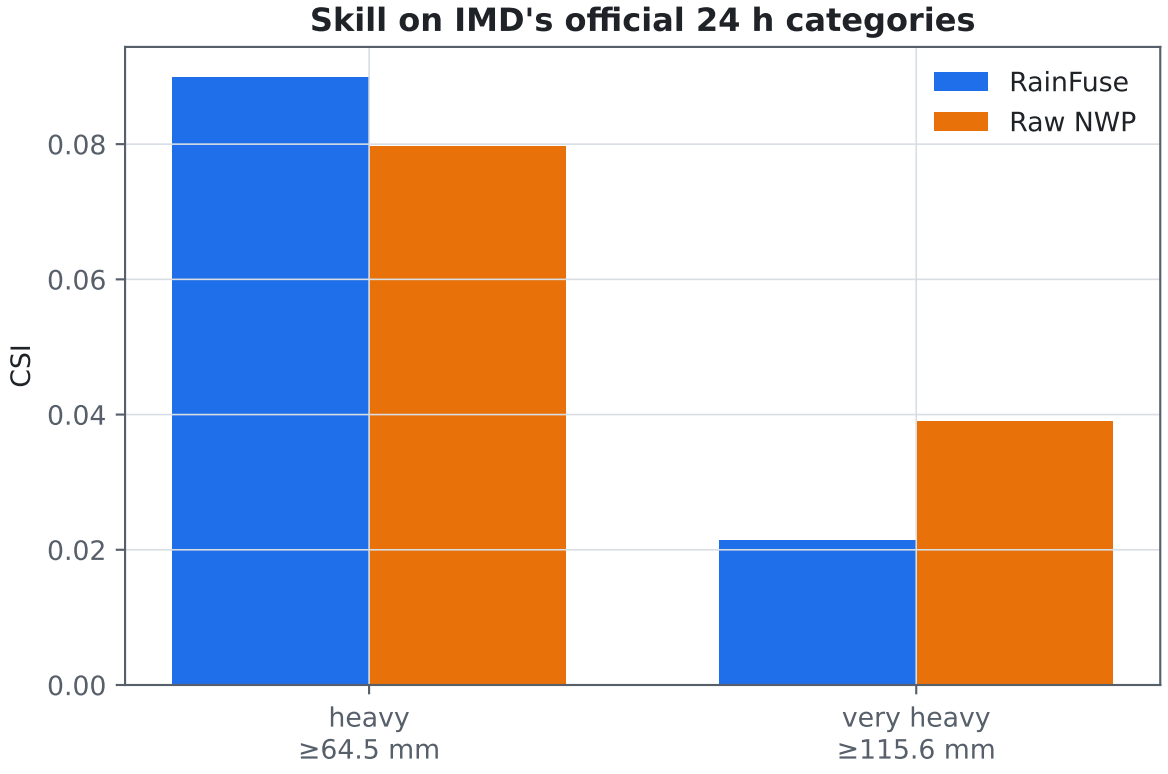
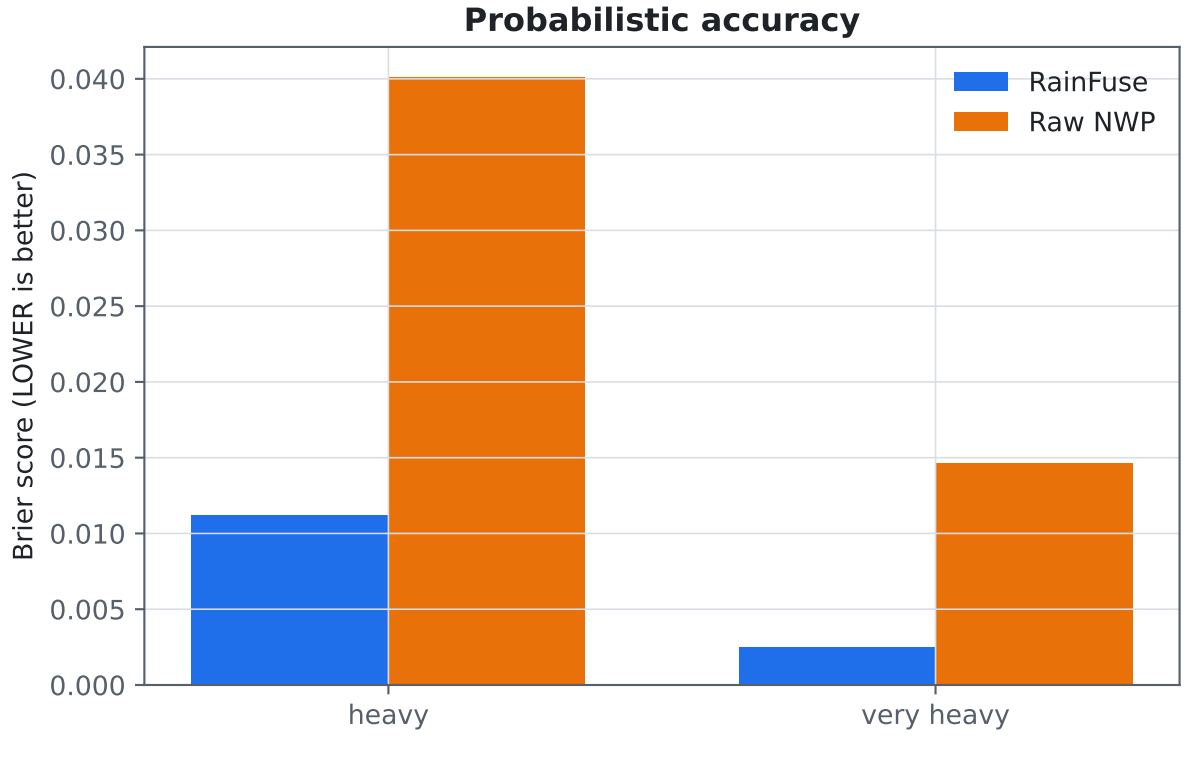
RainFuse — correcting the physics against IMD's own gauge grid





Truth is IMD's own gauge-based 0.25° gridded product; thresholds are IMD's own official categories. Trained on NW India 70-84E 21-33N, 2,793 IMD cells because the Delhi box holds only six IMD cells — far too few positives to learn from. The Brier improvement is the larger win: better-calibrated probabilities, not just hits.
